WO 2004/038117 PCT/US2003/032453

## What is claimed is:

- 1. An apparatus comprising:
- an elongated tubular form element, wherein the tubular form element
  includes a tubular boundary, wherein the boundary bounds a longitudinal
  interior chamber, wherein the tubular form element includes at least one female
  engagement portion adapted to engagingly receive a male engagement portion,
  wherein the at least one female engagement portion extends into the interior
  chamber, wherein the at least one female engagement portion includes an
  opening at the boundary, wherein the tubular form element includes at least one
  male engagement portion extending outwardly of the boundary.
  - 2. The apparatus of Claim 1, wherein the tubular form element is of a symmetrical permitting geometry.
  - 3. The apparatus of Claim 1 or 2, wherein the tubular form element is octagonal and wherein there are at least five female engagement portions.
- 4. The apparatus of Claim 1, 2, or 3, wherein the tubular form element is octagonal and comprises at least seven wall faces and wherein there are at least two male engagement portions.
  - 5. The apparatus of any of Claims 1-4, wherein the tubular form element has apertures in at least one face of the form element.
  - 6. The apparatus of any of Claims 1-5, wherein the tubular form is operative to mate with another tubular form element by having one female engagement portion of one tubular form element mate with one male engagement portion of another tubular form element.

WO 2004/038117 PCT/US2003/032453

7. The apparatus of Claim 6, wherein mating of the male engagement portion and the female engagement portion occurs at a vertex of the form element.

5 8. The apparatus of Claim 7, wherein mated multiple tubular form elements are operative to form a wall structure.

10

- 9. The apparatus of Claim 8, comprising multiple wall structures, wherein the multiple wall structures form at least one wall of a building.
- 10. The apparatus of Claim 8 or Claim 9, further comprising insulation, reinforcing bars, and concrete within the multiple wall structures.
